

REFERENCE CROSSWORD: FIND THE BEST ANSWER!

Across:

1. Best source to use to find 8 across.
7. Read your Webster's!
8. Words that mean the same.
10. Best source for quick facts on a wide variety of subjects.
12. When using a book, this table can help determine what information is in the book.
14. A book that tells about a person's life.
15. The meaning of a word, which can be found easily in 7 across.
16. The proper order of letters in a word, also found in 7 across.

Down:

2. In many volumes or in one, this tool holds the key to large quantities of information
3. Use this to find the correct page number in a book or set of books.
4. How to say a word: use 7 across to find the correct way!
5. Try the almanac to find lots of these factual numbers.
6. A collection of maps.
9. The section of the library where many of these tools are kept.
11. A word meaning opposite.
13. Found in an atlas.

Dictionary and Thesaurus:

One of the most helpful tools for answering questions about words or language is the dictionary.

A dictionary lists words alphabetically. It gives the meaning, spelling, part of speech and pronunciation of words. It often lists multiple definitions and how many syllables a word has. Some dictionaries also give the word origin, antonyms, and may also use the word in a sentence.

The most famous dictionary is Webster's, but be careful. The name "Webster" is not copyrighted! Almost anyone can print a dictionary, and use the name Webster in the title.

A *thesaurus* is a special word dictionary. It gives synonyms and antonyms for words.

Visit Dictionary.com online! The site includes writing resources...and they even have a thesaurus!

[Dictionary](#)

Clipart compliments of Discoveryschool.com By the way—a great site for homework help!

Other Helpful Reference Tools:

Atlases:

An atlas is a collection of maps. There are atlases of the world, and atlases of specific regions. For online help, try *Infoplease*.

[Infoplease Atlas](#)

Encyclopedias:

An encyclopedia is a book or set of books with facts on many subjects. This tool is a good jumping off place for research, and often will direct to other helpful sources in their articles.

Almanacs:

An almanac is a book that offers a wide variety of information.

The World Almanac and Book of Facts gives up-to-date information on many different subjects. It offers statistical information and interesting facts about government, population, awards, and sports.

One of the most famous and longest running almanacs is the *Farmer's Almanac*. It offers advice on farming, weather predictions, and anecdotes. Another famous almanac is *Poor Richard's Almanac*, written by Benjamin Franklin from 1732-1738.

Books of Quotes:

When writing a paper, it is often a nice touch to add something extra. Quotes can be valuable to show what other people have said about your topic.

A famous book of quotations is *Bartlett's Familiar Quotations*. This source lists quotations on a wide variety of subjects. Visit them online at [Bartleby.com!](#)

[Bartleby.com: Great Books Online](#)

This site (named after Herman Melville's famous character, Bartleby the Scrivener) indexes by author, subject and title. Among other reference sources, Bartleby offers access to the Columbia Encyclopedia, the World Factbook, Bartlett's Familiar Quotations, American Heritage Dictionary and Roget's II: The New Thesaurus.

Dictionary and Thesaurus Questions

Answer these questions using a dictionary:

1. A bouquet can refer to a cluster of _____ or the _____ of wine.
2. The word coupon can be pronounced in how many ways? _____.
3. What is a windjammer? _____.
4. Spell mis-spelled correctly: _____.
5. What is mahjong? _____.

Match these words with their synonyms (use a thesaurus):

- | | |
|---------------|-----------------|
| 6. Conjecture | a. Stole |
| 7. Conundrum | b. Supposition |
| 8. Indelible | c. Puzzle |
| 9. Pinnacle | d. Monarch |
| 10. Purloined | e. Imperishable |
| 11. Reference | f. Immunize |
| 12. Sovereign | g. Disrepute |

Dictionary and Thesaurus Questions

Tips for Using Search Engines

One of the things that will make you a better web searcher is understanding what you need to type in order to tell the search engine exactly what you are looking for.

There are two categories of search operators: Boolean and *non-Boolean* operators. An operator is a word or symbol that you type in that gives the search engine directions to help it know what to search for.

Using these operators can narrow or widen your search, helping you find web sites that may be useful to you.

You will have to check out the individual search engines to find out which operators work.

Boolean Searching:

AND means the search results must have both terms – often it is typed in UPPER CASE, but not always

AND decreases the number of web sites that will be found, narrowing in on specific topics.

Example: pollution AND water will look for web sites about both pollution and water

OR means the search results can have just one of the terms

OR increases the number of web sites that will be found, broadening your search

Example: pollution OR water will look for web sites that mention **either** pollution or water

NOT means any result containing the second term will be excluded

NOT decreases the number of web sites that will be found, narrowing your search.

Example: pollution NOT water will look for web sites about pollution that do not involve water

Warning: Be very careful about using **NOT**. If the web site mentions water even once, it may be left out. This could rule out some very useful web sites. Likewise, you must be careful when using **OR**. You can end up with a huge number of sites to sort through.

Non-Boolean Searching:

+ works like **AND**, making the term required in the search results
the + should be placed directly in front of the search term without any spaces

Example: pollution +water will look for web sites about pollution that also mention water.

- works like **NOT** and means to exclude the term
the - should be placed directly in front of the search term without any spaces

Example: pollution -water will also look for web sites about pollution that do not involve water.

" " placed around terms means the search engine will look for the exact phrase

Example: "water pollution" will look for that exact phrase. This can make your search very specific.

Warning: Just as with the Boolean terms, you must be careful when using - that you do not eliminate web sites that might mention the term you do not want, but are not really about that term. - water may eliminate web sites that are about air pollution but mention water pollution as well.

How to find out which search operators to use:

Different web sites and search engines use different systems, and you will need to learn which search terms work best with your particular search engine.

Many web sites and search engines will tell you which to use if you click on buttons such as HELP or ADVANCED SEARCH or POWER SEARCH or SEARCH TIPS. They may also offer other search limit options such as letting you pick dates or languages. Explore your favorite search engines to find out what they can do!

Name _____ Date _____ Class _____

Search Engine Practice

Search Engine Name/Web Address _____

Which search operators (Boolean and or non-Boolean) work with this search engine? _____

How did you find this out?

What search options are you offered?

(Go to advanced/power search options and list the different options you are given for your search details.)

Which did you pick? Why?

What term did you enter for your initial search? _____

How many results ("hits") did you receive? _____

What did you find that was not useful, or not related to your topic in your results? (Give several examples)

Try several different combinations using search operators to narrow your search. Describe the combinations you tried and the results you got.
